

POLICY DOCUMENT FOR QUEST QUAID-E-AWAM UNIVERSITY RESEARCH
JOURNAL OF ENGINEERING, SCIENCE & TECHNOLOGY
(QUEST RESEARCH JOURNAL)

1. About QUEST Research Journal

Quaid-E-Awam University Research Journal of Engineering, Science & Technology (also known as QUEST Research Journal) is the official bi-annual, open-access Journal of Quaid-e-Awam University of Engineering, Science & Technology, published since 1997 with ISSN-#1605-8607. We publish high-quality research papers from academia as well as various research institutes and organizations. The submitted papers go through a rigorous, blind peer-review process. The paper submission process is automated by an Open Submission System (OJS), facilitating not only the authors, but also the editors and reviewers. We maintain a decent acceptance ratio by publishing only novel research work.

2. Mission & Scope

QUEST Research Journal is an open-access, double blind peer-reviewed, bi-annual research journal which serves as an international platform to the researchers and academicians to publish high-quality research material in different domains of engineering, science and technology. We strive to pursue high publication standards and ethics by strongly discouraging sub-standard, plagiarized, fabricated and/or poorly-written / poorly-presented research contents. At the same time, we lay special emphasis on novelty and productive contribution in the field of engineering, science and technology.

The topics of particular interest include, but are not limited to:

1. Geo-informative systems, parallel processing, pervasive computing, image and video processing, computer vision, artificial intelligence, data mining, cloud computing, network security.
2. Sustainable environment / energy, green energy, renewable energy, energy efficiency and conservation, climate change, environmental economics, water management.
3. Digital signal processing, embedded systems, fuzzy logic, VLSI, wireless communication, wireless sensor networks, robotics, mobile communication, optical circuits, green electronics.
4. Aerodynamics, fluid mechanics, combustion & energy systems, design and manufacturing, dynamics and control, material and structures, vibrations, acoustics.
5. Electrical power transfer, voltage protection systems, intelligent feeder control systems, feedback control systems, renewable power conversion, instrumentation and control, power quality improvement.
6. Smart city, infrastructure efficiency, manufacturing instrumentation and control, geotechnical engineering, intelligent transportation and logistics, urban planning, bridge and tunnel engineering, green architecture / construction, earthquake engineering, ecological construction, urban traffic control.

3. Aims & Objectives

Aim:

- QUEST Research Journal will publish and solicit genuine and novel work on contemporary trends in the incipient domains of science and engineering technologies.

Objectives:

1. To provide a platform to researchers and academicians for bringing innovative research ideas from diverse disciplines of engineering and science.
2. To promote research publication and dissemination at affordable or at no cost in long run.
3. To bridge the academia-industry gap for socio-economic development.

4. Publication Frequency & Timeline

QUEST Research journal is published bi-annually since 1997. The issues are released in the last week of June and December.

5. Publishing Procedure

The standard publishing procedure of QUEST Research Journal is summarized as follows.

1. The QUEST Research Journal has an integrated Open Journal Submission (OJS) system through which the authors can submit their papers. While submitting the paper, the author is required to create an account at OJS which is used for the entire communication following the paper submission.
2. The editor is responsible for the preliminary scanning of the paper and ensuring that it is neither published anywhere else nor contains a high amount of plagiarism. If the similarity index of the submitted manuscript is found beyond the acceptable limit (19%), the manuscript will be returned to the authors for modification.
3. The OJS will automatically assign a manuscript ID to the paper. Subsequently, the editor will assign the paper to a relevant associate editor who will be responsible for the entire review process.
4. The associate Editor will send the paper to the experts of the field for review for a double blind peer-review process.
5. In case, the reviewers suggest the revisions, the manuscript will be returned to the author(s) for modification as per suggestions. The revised manuscript is again sent to the same experts for final comments, if required.
6. The final comments of the experts/reviewers are submitted to the Editorial Board for final decision.
7. The Editorial Board selects papers among the approved ones for publication in the upcoming issue.
8. The Editor issues acceptance or rejection notification to the corresponding author(s).

6. Authorship

QUEST Research Journal has the following policies for the authorship of a paper.

- In case of multiple authors, a person chosen as the corresponding author will handle all correspondence about the article and sign the publishing agreement on behalf of all the authors. The corresponding author is responsible for ensuring that all the authors' names, affiliations, contact details, and the order in which the names appear are correct.
- Authorship will only be given to those individuals who have substantially contributed in the said article. That could be in the conception, study design, execution, acquisition of data, analysis and interpretation, drafting, selection of the journal, and agreeing to take responsibility and be accountable for the contents of the article
- After the manuscript is accepted for publication, any change in the co-authors may be reported to the journal's editor via the "[authorship change request form](#)" available at the journal's website. This form must be signed by all the authors, including the person you are adding or removing. The editor will need to agree to the change, and if a clear rationale has not been provided, the request may be rejected.

7. Review & Publication Policy

QUEST Research Journal employs the double-blind peer review process, where both reviewers and authors remain anonymous throughout the review process. Every submitted paper is first reviewed by the editor(s) for an initial scrutiny. During the initial scrutiny, the paper is also checked for plagiarism and the similarity index by using Turnitin software (<https://www.turnitin.com>). In case the paper contains significant amount of plagiarism, it is immediately rejected. If the paper complies with the journal's scope, policy, similarity-index limit, and the minimum quality level, it is sent to the peer-review. All the steps from the submission to the final decision are carried out via the Open Journal System (OJS) integrated with the journal's website.

The reviewers' comments are communicated to the author(s) for further revision/modification suggested by the reviewers. The revised version from the authors is sent to another round of review in case of major revision.

After the review process is completed, the final decision of the editor is communicated to the author via an acceptance / rejection email. In case of acceptance, the author is asked to submit the final proof-read version along with a copyright form and the publication fee.

The paper is finally sent to the production after a thorough review from the editors.

8. Originality & Plagiarism Policy

All the papers submitted in QUEST Research Journal are first passed through a Turnitin check. If the similarity index in the Turnitin report is 20% or above, or the similarity index from any one source is 5% or higher, the submission is declined.

9. Article Processing/Publication Fee

QUEST Research Journal does not charge any processing fee. The structure of the publication fee is as follows.

Authors in Pakistan	Rs. 15,000
Undergraduate & Master students (Pakistan)**	Rs. 10,000
Authors outside Pakistan	USD. 100\$

10. Disclosure & Conflict of Interest

QUEST Research Journal requires each author to disclose potential conflicts of interest. A conflict of interest occurs when professional conclusions regarding the complete and objective presentation of research are influenced or could be influenced by a secondary interest. Therefore, we require that our authors disclose such possible competing interests. Competing interests often arise with regard to financial matters. However, conflicts of interest can also be non-financial, professional, or personal and can exist in relation to institutions or individuals.

Authors:

Examples of possible competing interest that are directly or indirectly related to the authors' research include (but are not limited to) the following:

- Employment or consultancy;
- Position on advisory board, government board, board of directors, or other type of management relationships;
- Financial relationships, for example stock or share ownership or investment interest;
- Intellectual property;
- Holdings of relatives that may have financial interest in the work;
- Gifts;
- Acting as an expert witness;
- Membership of lobbying or advocacy organizations;
- Personal relationships with individuals involved in the publication process.

To prevent ambiguity, authors must state explicitly whether potential conflicts do or do not exist. Authors should do so in the manuscript after acknowledgement section, providing additional detail, if necessary, in a cover letter that accompanies the manuscript.

Editors & Reviewers:

A conflict of interest takes place when there is any interference with the objective decision making by an editor or objective peer review by the referee. Such secondary interests could be financial, personal, or in relation to any organization. If editors or referees encounter their own conflict of interest, they have to declare so and – if necessary – renounce their role in assessing the respective manuscript.

Reasons for editors and referees to recuse themselves from the peer-review process include (but are not limited to) the following:

- They currently work or have recently worked at the same institution or organization as an author.
- They are currently collaborating with an author or have done so recently.
- They have published with an author during the past 3 years.
- They currently hold or have recently held grants with an author.
- They have a personal relationship with an author that does not allow them to evaluate the manuscript objectively.

Where there is a strong case (e.g. in small fields of science) for editors to use a referee to whom one or more of these cases apply, the editors should aim to obtain an objective review. They should also secure at least one review from a fully independent referee.

Editors who make final decisions about manuscripts must have no personal, professional, or financial involvement in any of the issues they might judge. Other members of the editorial staff, if they participate in editorial decisions, must provide editors with a current description of their financial interests (as they might relate to editorial judgments) and recuse themselves from any decisions in which a conflict of interest exists. Editorial staff must not use information gained through working with manuscripts for private gain. The journal editors should publish regular disclosure statements about potential conflicts of interests related to the commitments of journal staff.

Reviewers must disclose to the journal editors any conflicts of interest that could bias their opinions of the manuscript, and they should recuse themselves from reviewing specific manuscripts if the potential for bias exists. As in the case of authors, silence on the part of reviewers concerning potential conflicts may mean either that conflicts exist and the reviewer has failed to disclose them or conflicts do not exist. Reviewers must therefore also be asked to state explicitly whether conflicts do or do not exist. Reviewers must not use knowledge of the work, before its publication, to further their own interests.

11. Correction & Retraction Policy

The cases of retraction, correction and plagiarism should be reported to the editor. The editor analyzes the reported paper as per the complaint and decides if the complaint is justified. He then prepares a case to be presented to the editorial board for deciding the fate of the paper. In case the editorial board finds the reports of plagiarism or false results to be valid, the paper is retracted from the corresponding issue and the same is communicated to the author(s). Following guidelines are followed to make such decisions. These guidelines have been derived from the [STM Guidelines](#) and [COPE Retraction Guidelines](#).

- In case of publication errors, a correction may be published in the next available issue of the journal.
- In case of undeliberate errors from the authors which remain undetected before the publication, the authors may request for a corrigendum
- In case of the misconduct of publication code, plagiarism, or publication of false results, a retraction note may be added with the paper in the next issue of the journal.
- In case of publication of an already published article, following steps may be taken:
 1. If the article is not in conflict with any publishing copyright, it is kept intact. An explanatory note is added to the article which is also published in the next issue of the journal.
 2. In case a copyright violation is reported, the matter is presented before the editorial board which may decide to remove the online version of the paper. In such a case, the bibliographic information will be retained with a note explaining the reason of the removal of the paper. The same removal note shall also be published in the next available print issue of the journal.

The editorial board is authorized to make any other appropriate decision not listed above, if necessary.

12. Policy & Principles on Research Data

- QUEST Research Journal encourages authors, where ethically feasible, to make the research data underlying their articles publicly available.
- The authors are encouraged to publicly release all data underlying any published paper.

13. Authors Contribution

All authors whose names appear on the submission should have

1. Made substantial contributions to the conception or design of the work; or the acquisition, analysis, or interpretation of data; or the creation of new software used in the work
2. Drafted the work or revised it critically for important intellectual content
3. Approved the version to be published
4. Agreed to be accountable for all aspects of the work in ensuring that questions related to the accuracy or integrity of any part of the work are appropriately investigated and resolved

14. Publication Ethics & Malpractice

All the parties involved in the publishing process, including the authors, editors, editorial team, editorial board, steering committee, reviewers, and the publishers strictly adhere to the agreed-upon rules, publication ethics and the standard publication procedure. Before publishing research articles in QUEST Research Journal, authors declare that their work is genuine, un plagiarized (in whole or in part), and has not been submitted for publication elsewhere. They also declare that the potential conflict of interest has been clearly disclosed.

In the event that QUEST Research Journal is made aware of any allegation of research misconduct relating to a published article (plagiarism, citation manipulation, data falsification/fabrication, etc.), the policy followed to deal with the allegation is detailed in the document [Research Misconduct Policy](#).

15. Open Access Policy

This is an open access journal which means that all content is freely available without charge to the user or his/her institution. Users are allowed to read, download, copy, distribute, print, search, or link to the full texts of the articles without asking prior permission from the publisher or the author.

16. Publishing License

All articles of this journal are published under Creative Commons Attribution (CC BY 4.0) License.

17. Copyright Policy

All the articles published in QUEST Research Journal are open access. QUEST Research Journal holds the rights of all the published articles. Authors are required to transfer copyrights to journal to make sure that the paper is solely published in QUEST Research Journal; however, the authors and readers may freely read, download, copy, distribute, print, search, or link to the full texts of articles without asking prior permission from the publisher or the author.
